Well I collected a battery, some quartz, a lump of feldspar, some sand from the river & some building sand.

[Up](#) [h#z](#) [h#z](#) [h#z](#) [h#z](#)

It worked just as you said; (I'm in NH)

battery +ve ; CCW

Quartz; CCW

Both types of sand ; CWW

Feldspar; CW

I'm going to get some double point quartz off the internet and have a go, wont be able to add orgonite though, it'll have to be just plaster of paris, sand & quartz

G'day all... though I make heaps of orgonite for gifting and homes, phones and personal pieces , I'm still a BIG fan of plasterite. The main pieces are the large traffic cone size wrapped in extension cords, to clean up electricity in the home and also broadcast to the grid... virtually me on my gifting run across Oz has scored one of these ... one fellow who was quite energy sensitive was quite astounded (he could feel it within a coup set one up in his kitchen that was plugged in between powerpoint and his fridge, thus running 24/7... a natural sceptic surprised...loved it ..ha ha

However. on orgoniteplus,(see previous posts) the forum where I discovered plasterite , a relative new comer to the game has had astounding results His commentary is long..VERY long and somewhat poetic ... if you can get through it and read between the lines , you'll get his drift... For me , his message is totally inspiring to make more ...more BIGGER cones ...

Of course there's always a bit left over to knock up some Hhg's to share around

After all , a 20 kg bag of Boral plaster in Australia is under \$20... beachsand free, a decent quartz point and handful of mixed gems and crystals won't be what a rush !!!

Here's sunflowerbelgium's post...enjoy

[http://orgoniteplus.net/Forum/viewtopic ... 7&start=10](http://orgoniteplus.net/Forum/viewtopic...7&start=10)

In fact he's made extra posts since them ... worth a look too !

Cheers

G'day allthere's been quite a few folk exploring the exciting energy of plaster orgonite of late ...and a few new and innovative techniques explored

Firstly , an interesting video tutorial with great sound track too

<https://www.youtube.com/watch?v=C7Wl6gu...e=youtu.be>

Next, I came across this vid , the author using concrete piecesI must say , I do not agree with most of his philosophies , but the techniques of using t had me fascinated and excited ,

<https://www.youtube.com/watch?v=7JcKcBuGuPQ#t=2147>

So I knocked up a quick throw together,, using plaster orgonite techniques of course..... making the tetrahedrons in the corners of cardboard boxes.... but wow...surprisingly energetic ..!!!

Then , through a Face Book group exploring plaster orgonite, I found this Vid showing how to make very smooth tetrahedron forms...used in Bernoulli array beauty !!!

<https://www.youtube.com/watch?v=QXSCd9luSxY>

Next job was to hunt down an older style plastic crate, and took to it with an angle grinder..... this gave me two tetrahedron moulds , .So after a couple Bernoulli Ring array.....WOW ... now this did blow me away with energy . easily felt standing nearby....I did a Bovis reading that spun up around the 40 mark.....Whooooa ! now that is something !!!

Each piece weighs around 7 kilos and about 40cm across at the longest length.

The photo shows the plaster Bernoulli Ring and the two plastic moulds used with the remains of the plastic crate

So if you are after a cheap, but extremely strong orgone device, this could be the one to have a play with

Cheers and enjoy
